Research Topics

This list is not a comprehensive list of all possible topics, and instead is designed to get you thinking about potential topics for your research project. You are welcome to pick a topic that is not listed here. That being said, if one of these topics interest you, feel free to claim it!

Cognitive Psychology

1. Can individuals accurately predict their future remembering?

2. Is eyewitness memory reliable?

3. Has modern technology affected our attention spans?

4. Are there cognitive benefits to being bilingual?

Social Psychology

5. Is there a relationship between violent media consumption and violent behavior?

6. Do implicit association tests (IATs) accurately measure unconscious biases?

7. How do gender roles portrayed in media affect children?

8. Are personality traits stable over time?

9. Do personality tests accurately measure an individual's traits (i.e., how valid are these assessments)?

Clinical Psychology/Mental Health

10. What are the long-term effects of childhood trauma? Do children who have experienced an emotional or physical trauma continue to experience the effects later in adulthood?

11. Do antidepressants increase suicide risk?

11. Eating disorders are largely portrayed as a disorder affecting women. How have diagnoses and perception of eating disorders in men historically differed from women?

Child Psychology/Human Development

13. Does intelligence testing accurately gauge children's potential?

14. Does the increasing use of technology during childhood negatively impact development?

15. Are today's youth more self-centered than previous generations?

16. Is there a link between intelligence and genetics?
