PSYC 3303 Writing Prompts (Fall 23)

Research and Ethics

1. Was Stanley Milgram's classic study on obedience unethical?
2. What is the replication crisis in psychology? Why should we care and what can be done?
3. Describe the ethical implications of the Stanford Prison Experiment.

Cognitive Psychology

4. What is the relationship between memory and metamemory? Can individuals accurately predict their future remembering?
5. Is testing yourself a better study strategy vs. just studying?
6. Is eyewitness memory reliable?
7. Are bilingual individuals better at multi-tasking compared to mono-lingual individuals?

Social Psychology

8. Is there a relationship between violent media consumption and violent behavior?
9. Do implicit association tests (IATs) accurately measure unconscious biases?
10. How do gender roles portrayed in media affect children?
11. Do personality tests accurately measure an individual's traits (i.e., how valid are these assessments)?

Clinical Psychology/Mental Health

12. What are the long-term effects of childhood trauma? Do children who have experienced an emotional or physical trauma continue to experience the effects later in adulthood?
13. Do antidepressants increase suicide risk?
14. Eating disorders are largely portrayed as a disorder affecting women. How have diagnoses and perception of eating disorders in men historically differed from women?

Child Psychology/Human Development

15. Are intelligence tests the best way to assess children's potential?
16. Are today's youth more self-centered than previous generations?

Historical Topics

17. Who was Herman Ebbinghaus, and what was his contribution to the study of memory?
18. What was the cognitive revolution? How does the cognitive approach to psychology differ from behaviorism?
19. Provide a brief history of the use of lobotomies in psychology. What were the ethical implication of this practice?
