PSYC 4503 Final Presentation Guidelines

Goal: Groups will present their questionnaires and results during the last week of the class. Each group will put together a 15-minute PowerPoint presentation which will:

1) Summarize the psychological construct that the group chose to investigate AND the three dimensions that you believe underly it.
2) Provide a literature review, including the theoretical motivation for your scale. This literature review should include at least four peer-reviewed sources.
3) Summarize your methods of data collection (participants, examples of your scale including sample items, procedure, etc.)
4) Analyze the data you collected. Provide descriptive statistics (e.g., means and standard deviations) for your subscales and full scale.
5) Demonstrate validity and reliability. How you choose to do this will be up to you, but you'll need to run the correct statistical tests to demonstrate that your scale is valid and reliable.
6) Provide a discussion and conclusion. Summarize your findings and interpret them. What conclusions can you draw from your analyses?
